

HealOzone

THE DENTIST DID NOT DRILL!

The sentence you will say in future after your dentists had treated you with ozone, as the

**NEWEST HEALOZONE TECHNOLOGY
ELIMINATES CARIES WITHOUT PAIN!**

It's a scientific fact - HealOzone works!

- tested on more than 200,000 cases;
- satisfied patients in more than 95% cases;
- clinical studies from London, Munich, Bern and Belfast;
- a completely safe system: NO patient, doctor nor nurse is exposed to ozone;
- it destroys 99.9% of bacteria which cause caries in 20 seconds;
- natural "renewal" of the entire set of teeth in a matter of weeks;
- complete treatment of root canals can be done by one procedure alone.

No pain, no caries!

- no anaesthesia, no drilling, no pain;
- perfect for treating patients afraid of dentists;
- no health problems after treatment;
- decreased need for fillings;
- maximal renewal of tooth substance;
- treated teeth are more resistant to caries attack.

Dental implants

- Today dental implants are one of the most frequent solutions to person's protection problems in cosmetic dentistry in the world.
- Dental implants are appropriate for the substitution of one or more missing teeth. This avoids whetting of other teeth in the mouth and at the same time guarantees a more natural appearance in an aesthetic sense.
- Dental implants essentially contribute to a more quality life of people with total prostheses.
- Stability of prostheses, which upgrade implants, enables normal feeding, speaking, laughing...

Technology used in our dental practice

- DIAGNODENT (CARIES DETECTION LASER)
 - MULTIMEDIA
 - INTRAORAL CAMERA
 - DIGITAL RTG
 - HEAL OZON
 - LASER TEETH WHITENING
 - and LAB
- CAD/CAM COMPUTER SUPPORT SYSTEM FOR THE MAKING OF TEETH PROTECTION PRODUCTS

The dentistry is situated in the very heart of the Pomurje region, the land of health and friendly people, on the premises of the natural park Terme 3000 Moravske toplice.

- Tooth jewelry
- CAD CAM computer making of teeth protection products
- Laser checkup of teeth
- HealOzone, NO-PAIN CARIES OR HERPES TREATMENT
- Implant

BriteSmile - teeth whitening

FOR YOUR BRILLIANT AND HEALTHY SMILE

BriteSmile is the best investment in yourself.

Our revolutionary technology is clinically proven. After the procedure your teeth are more white, and more than 800,000 of satisfied users around the globe agree.

Our dentistry service performs teeth whitening procedures under dentist's supervision. Gums and tissues below are protected against effects of whitening agents. Whitening is performed in several phases and, after the procedure is completed, teeth are covered by special preparations to prevent oversensitivity of teeth to chemical and thermic stimuli.

CERAMIC (porcelain) TEETH CROWNS

Teeth crowns are made when we are not satisfied with the appearance of individual teeth, or if the tooth structure is damaged to the extent which makes renewal with the filling impossible.

Teeth crown covers a single tooth. When crowns cover more teeth and are interconnected, we talk of bridgework.

Ceramic teeth crowns imitate natural appearance of teeth very well.

Ceramics or porcelain for teeth has numerous advantages in comparison to other materials:

- does not colour gums
- extremely resistant crowns in form and colour
- appropriate for renewal of severely damaged and broken teeth
- appropriate for the replacement of old/disused crowns

CERAMIC (porcelain) BRIDGEWORK

Missing teeth in the teeth line can be replaced by bridgeworks.

Teeth are whetted at the gap and bridgework is anchored on.

Ceramic (porcelain) bridgeworks guarantee natural appearance of teeth.

Inlay and Onlay

Inlay is the optimal AESTHETIC AND FUNCTIONAL solution for more complicated injuries to GRINDERS or MOLAR TEETH.

Prepared on the basis of person's precise measures in the tooth laboratory. In contrast to standard fillings, Inlay OR Onlay doesn't weaken the tooth structure, but actually strengthens it. This process also increases the ability of chewing the cud by 50 to 75%.

GOLDEN INLAY/ONLAY for people in search of security and durability.

CERAMIC INLAY/ONLAY, for demanding clients looking for aesthetics in form and colour.

Veneers

Excellent lasting investment into a beautiful smile.

Porcelain veneers are the perfect solution for coloured, damaged, worn out and broken teeth – they are a powerful instrument of aesthetic dentistry. In particular, they are made in the visible sector – incisor teeth and canine teeth, but above all for the purpose of creating aesthetic harmony.

In addition to the above mentioned cases they are also used for changing tooth form, in dealing with certain forms of diastema, or in dealing with minor orthodontic anomalies.

Veneer is perfect for everyone who are afraid to laugh with ease because of their teeth. For everyone hiding their smile...

It is a more resistant solution than a conservative solution with composites. Veneers are custom-made, porcelain scales, specifically made to look natural. They are extremely durable and easy to maintain.
